DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16, drawn to an LCD device, classified in class 349, subclass 155.
 - II. Claims 17-30, drawn to a method of manufacturing an LCD apparatus, classified in class 349, subclass 187.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, Group II requires that the pixel voltage applying part outputs a voltage to each pixel area. Furthermore, Group II also discloses a space between the pixel are and an adjacent pixel area, which is not found in the device of Group I. As a result, the process required in Group II can be used to make a different LCD product than the one that is claimed in Group I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
